

# ACCEPT

The accept attribute specifies a filter for what file types the user can pick from the file input dialog box. Tip: Do not use this attribute as a validation tool. File uploads should be validated on the server

```
1 <input type="file" accept=".png, .jpg, .jpeg">
```

# DOWNLOAD

The download attribute specifies that the target (the file specified in the href attribute) will be downloaded when a user clicks on the hyperlink.

```
1 <a href="index.html" download="fileName">Download Now</a>
```

# MULTIPLE

The multiple attribute is a boolean attribute. When present, it specifies that the user is allowed to enter/select more than one value.

```
1 <input type="file" multiple>
```

# SPELLCHECK

The spellcheck is a global attribute that specifies whether the element is to have its spelling and grammar checked or not

```
1 <p contenteditable="true" spellcheck="true">  
2   Check the spelling and grammer  
3 </p>
```

# TRANSLATE

The translate attribute specifies whether the content of an element should be translated or not.

```
1 <p translate="no">Translate Me</p>
```

# POSTER

The HTML poster Attribute is used to display the image while video downloading or when the user clicks the play button.

```
1 <video controls src="https://bit.ly/3nyt5uIO"  
2   poster="image.png"></video>
```

# CONTENTEDITABLE

The contenteditable attribute specifies whether the content of an element is editable or not.

```
1 <div contenteditable="true">Im Editable</div>
```
