# 3 Ways to Copy Objects in JavaScript

Hardik Jhalani

Use the spread (...) syntax

```javascript
const person = {
    firstName: 'Hardik',
    lastName: 'Jhalani'
};
```
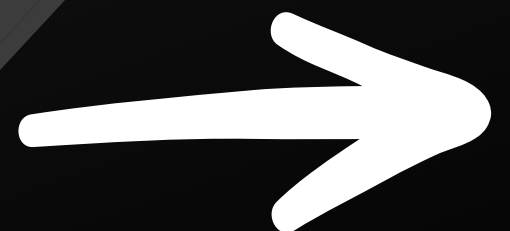

```javascript
const personCopy = {
    ...person, //* using spread operator
}
```

Use the Object.assign() method

```javascript
const person = {
    firstName: 'Hardik',
    lastName: 'Jhalani'
};
```

```javascript
const personCopy = Object.assign({}, person);
//* 👆 using Object.assign() method
```

Use the JSON.stringify() and JSON.parse() methods

```javascript
const person = {
    firstName: 'Hardik',
    lastName: 'Jhalani'
};
```

```javascript
const personCopy = JSON.parse(JSON.stringify(person));
//* 👆 using JSON.stringify() and
//*    JSON.parse() methods
```
