NODEMAILER

Nodemailer is a module for Node.js applications to allow easy as cake email sending. T project got started back in 2010 when there was no sane option to send email messages today it is the solution most Node.js users turn to by default.

```
npm install nodemailer
```

ⓘ Tip

Check out EmailEngine – a self-hosted email gateway that allows making REST requests against IMAP and SMTP servers. EmailEngine also sends webhooks whenever something changes on the registered accounts.

Using the email accounts registered with EmailEngine, you can receive and send email . EmailEngine supports OAuth2, delayed sends, opens and clicks tracking, bounce detection, etc. All on top of regular email accounts without an external MTA service.
